Fiberock® Aqua-Tough™

USG Boral Fiberock® Aqua-Tough™ is the ideal lining for high traffic areas, wet areas and Alfresco ceilings. Fiberock® Aqua-Tough™ Panels are a unique, gypsum fibre product that includes a water-resistant core for supreme durability and superior performance. Easy to cut and install, these panels are highly desirable and durable in wet and dry environments alike.

Fiberock® Aqua-Tough™ linings can be used in ceiling applications as well as interior walls, including exterior areas protected from direct exposure to rain such as Alfresco dining, verandahs, carports, soffits or eaves that are horizontal or incline down away from the building. Fiberock® Aqua-Tough™ is Good Environmental Choice Australia (GECA) certified and may contribute to Green Star points when assessed under various Green Star rating Tools.

ADVANTAGES

- Exceptional impact resistance; when compared with plasterboard linings
- Fire rated wall systems up to 60 minutes (single layer) and 120 minutes (2 layers)
- High mass gives superior noise control, including inter-tenancy rated systems
- Excellent substrate for paint and tiles and a number of abrasion resistant coatings
- Paperless board means no paper face to scratch, tear, delaminate or feed mould
- Suitable fixtures can be attached to linings without the need to screw into studs or noggings
- Water resistance superior to plasterboard linings
- Mould resistance superior to plasterboard linings

PERFORMANCE DETAILS

IMPACT

SOFT BODY IMPACT TEST
USG Boral Fiberock® exceeds BCA specification C1.8 requirements for soft body impact.

- Testing was conducted with a 27.2kg pendulum swing, impact bag into a 3.0m high wall specimen.
- A practical example of soft body impact is a bump to a wall surface by an average weight male shoulder at speed.

HARD BODY IMPACT TEST

Fiberock® Aqua-Tough™ is subject to extensive hard body impact testing.

- Testing was conducted by a pendulum swing of a 100mm diameter 4.0kg steel ball on a 3.0m axis against the wall specimen.
- An example of hard body impact is a bump by a hospital trolley or an intentional kick to wall surface.

EXTRA HIGH ABRASION RESISTANCE

Where very high levels of abrasion resistance are needed, a coating of USG Boral Tuff-Hide™ Primer-Surfac...
Fiberock® Aqua-Tough™

MOULD
The cellulose reinforcement within Fiberock® Aqua-Tough™ is not a readily available food source for mould because it is processed under high temperature and pressure and also because it is dispersed throughout the material - away from everyday moisture which remains on the sheet surface. As a result Fiberock® Aqua-Tough™ is the stand out leader in resistance to mould formation, scoring the top score of 10 in the ASTM D3273 test.

STRUCTURAL

• Exceeds compliance criteria for BCA resistance to impact test to ASTM E695-75.
• Exceeds compliance criteria for BCA resistance to static pressure test to ASTM E72-80.
